# ABOUT US

---

At Del Carbon LTD, we are more than just a charcoal manufacturer—we are advocates for a cleaner, greener future. Established in 2018 in Accra, Ghana, our mission is to provide sustainable energy alternatives through the production of premium, all-natural charcoal and briquettes. By harnessing the potential of waste materials such as coconut shells and wood offcuts, we create energy-efficient fuel products that reduce environmental impact and support local economies. Our dedicated team of professionals is passionate about promoting responsible energy consumption by delivering clean-burning, high-calorific-value charcoal to domestic and international customers. With no artificial additives, our briquettes and raw carbonized materials are safe, reliable, and ideal for commercial, industrial, and household applications.
